

# Webstore — for education

## A simple, powerful, cost-effective solution

- Allow staff and students to access the school intranet from home
- Enable non-technical staff to share files effectively
- Showcase your good practice and students' work
- Get real value from the Internet
- Increase the use of ICT while decreasing the need for specialists

We all need to have swift and efficient access to information and, as we use ICT more and more, that need is growing. There are now files everywhere: on the PC at home, on the school's Web site, in a home area on the school network, on a colleague's computer from a brainstorming session, on the school intranet, on students' computers, etc.

Intranets and Web sites can go a long way to solving the difficulties of accessing all these files; however, it is hard to access the former when you are away from the local network, and the latter is often not suitable for personal documents.

**Webstore for Education** is an innovative Web site that allows you to store private intranet files alongside publicly available materials.

### Key features:

- The potential to store files of any type, with no need for staff to learn HTML.
- A familiar structure of files and folders.
- The ability to upload files via simple wizards – there is no need for FTP.
- The possibility of hosting Web sites generated by most popular authoring tools.

- A rich security model of users and groups for private resources.
- Simple one-click switching of resources between private and publicly available.

### Plus

You can offer each of your users the opportunity to have a private folder – where they can store their day-to-day files and have them available wherever they have Internet access.

### Visit

[www.webstore-ed.net](http://www.webstore-ed.net) – and see how other schools are using Webstore. You will be able to see their public resources, but remember, there are lots of other items that they have not made publicly available.

Contact me at [d.smith@pearson.co.uk](mailto:d.smith@pearson.co.uk) or on **01223 319919** if you would like to discuss **Webstore for Education** further.

# Webstore

— Different views of Webstore

## The main interface

The interface uses a familiar folder and file structure. What's more, if you join as a group of schools we can provide you with your own home folder.

## Anonymous browsing

As an anonymous browser, you can only see resources that have been made publicly available (shown with a green dot).

## Logged-in user

Logged-in users can also see private files (shown here with a red dot). Plus many more functions are available on the right-hand side.
